Execution evidence (official template)

Source for `docs/Zishi_Execution_Evidence.docx`, which `web/scripts/officialdocs.py` writes on the organisers' template. Every hash below is re-fetched by `pnpm verify:all`. Full tables: `docs/EXECUTION_EVIDENCE.md` (Base Sepolia) and `docs/FISCO_EVIDENCE.md` (FISCO BCOS).

01 Evidence Summary

Selected topic and scenario

Topic F, Agent Wallet. Zishi is an AI wallet for an agricultural spraying drone on hire purchase. The drone earns per mu sprayed, repays its licensed lessor from every confirmed fee, fills a pilot bond, is slashed only on cryptographic proof of a rule break, and owns itself when the lease reaches zero. Four contracts (IntentLog, Bond, JobBoard, Lease) run on Base Sepolia (public, source verified) and on FISCO BCOS 3.16.3 (WeBank's consortium chain).

What the evidence demonstrates

- The engine itself settles each job's money on the deployed contracts on FISCO BCOS in one loop, on the front running fix (IntentLogV2, BondV2): 14 contract calls plus 10 funding transfers to fresh role wallets, 24 of 24 transactions successful (fee locked in JobBoard, confirmed and split, instalments through Lease.pay, the rogue intent committed by its own agent and slashed by proof from the vendor bond, the title moved to the pilot).
- A free AI model read the job offers in that run: 5 of 5 read by the model, 5 accepted by code against the signed listings.
- One full job against the deployed contracts on public Base Sepolia: 9 of 9 contract calls with real value.
- Every intent hash is committed to the IntentLog before the policy engine decides; in one real run each intent went to Base Sepolia and FISCO BCOS in the same step with the same hash (15 of 15).
- Failure recovery on chain: a failed call is retried, a job that cannot start is cancelled by contract and the farmer gets the whole fee back.
- The agent bound IntentLogV2 stops front running on FISCO: a stranger's commit reverts, the agent's commit and the slash succeed.
- `pnpm verify:all` re-fetched every claimed receipt: see `docs/results/receipts.json`.

02 Logs or Transactions

Simulated account/sandbox logs, or transaction hashes for Topic F

Contracts on Base Sepolia (chain 84532), source verified on Sourcify.

Contract	Address	Deploy transaction
IntentLog	`0x093eD0DD8E4bE4b0205a6e39d0c5988f5Cd8ad51`	`0xb43b1cfa02f6a6978edfa682e495be9534e0295c1b08bb27598c15dcab6367e9`
Bond	`0x6161f6e08c8695849e7A8aF74c39a5A1056d5435`	`0x68f7117ae33a89819473d89a4ec2a70d2a5a7da8c681721dfdb68d37ecd5c578`
Lease	`0x0D21c8f6C1e6e6EA2ae5fF073F51fC4d57AC5ed2`	`0xeaa13a7628e427b6043ef95172856bd536cb72a749f4872a8ef54b03405d5fdb`
JobBoard	`0xAbE83C0dD54EAd67DB63C8f9e854f00756f29952`	`0x97227e36f9d0c8beaa5fdd3e571ac0123e21c52f1017c4a2dd1bfdb40d2f6c1e`

One full job on the deployed Base Sepolia contracts (Basescan: https://sepolia.basescan.org/tx/).

03 Reproduction Guide

Steps required for judges to reproduce or verify the evidence

1. Check any Base Sepolia hash on https://sepolia.basescan.org or with one RPC call: `curl -s https://sepolia.base.org -H 'content-type: application/json' -d '{"jsonrpc":"2.0","id":1,"method":"eth_getTransactionReceipt","params":["<hash>"]}'`.
2. Re-check every receipt the repository claims: `cd web && pnpm install && pnpm verify:all` (FISCO sources are skipped if no FISCO node is running).
3. Bring up FISCO BCOS, deploy and run the smoke flow: `bash contracts/script/fisco.sh` (Docker).

4. Run the engine with settlement on FISCO: `cd web && FISCO_RPC_URL=http://127.0.0.1:8545 FISCO_PRIVATE_KEY=$(cat ../contracts/.fisco/deployer.key) pnpm settle`; add `ZISHI_FAULT=start-revert` for the recovery drill.
5. Run one full job on Base Sepolia with your own funded key: `bash contracts/script/fulljob.sh base`.
6. Tests: `cd contracts && forge test` (84), `cd web && pnpm test` (52 attacks, recovery, keys, oracle, dialogue).
7. Live: open https://zishi-fintechathon.vercel.app/app/fleet and press Start; with the demo token from the submission form, open /app/live?demo= once for real Base Sepolia mode.
