FISCO BCOS evidence

Generated by `pnpm fisco` (`web/scripts/fisco.ts`) at 2026-10-20T14:20:51.107Z from `web/evidence/fisco/run-2026-10-20T11-21-48-467Z.json`. Do not edit by hand.

The same engine that commits to Base Sepolia ran end to end on a FISCO BCOS chain, WeBank's consortium blockchain, through its Web3 JSON-RPC. Every row was fetched back from the node while this file was written: status, block and gas come from the receipt. For every IntentLog commit the calldata was decoded and the contract read back, and the hash on FISCO equals the engine's intent hash. FISCO fails a call to an address without code, so where Base carries a money event as calldata on a self transfer, FISCO commits the event's digest to the IntentLog under the job id keccak("anchor"): one real contract call per event, a hash rather than the JSON. Amounts are demo units with no monetary value.

1. Chain

Field	Value
Node	FISCO BCOS 3.16.3, one node in Docker, group0, PBFT
Web3 chain id	20200
RPC	http://127.0.0.1:8545 (through `contracts/script/fisco_rpc_proxy.py`)
Compiler	solc 0.8.26, evm_version paris (no PUSH0), foundry profile `fisco`
Deployer	`0xC9E4C312E90cda14354340DFd7b9569d820C1201` (throwaway key for this chain)

2. Contracts

Contract	Address	Deploy transaction	Block	Gas
IntentLog	`0x9555c12c2789e44868070d0d877f9baadabe4f54`	`0xb1152d67…dd30`	71	13,783
Bond	`0xe3f2011697301e15e4cf829b0aeb189fab754029`	`0x2465a40f…ff72`	72	181,346
Lease	`0x9c46a913abaf37cacd67f01f6f3b3e70f7b66601`	`0xfbc07711…e50b`	73	74,181
JobBoard	`0x20dc56e80b73f6066208a9d8197748f861579d37`	`0xd97cdec1…92f2`	74	142,813

Smoke flow from `contracts/script/fisco.sh`, receipts fetched by the script. Native balances are switched on with the chain admin key `build_chain.sh` generates, so value moves for real: the vendor bond holds 5 units in Bond, the job fee of 60 units is locked in JobBoard and refunded on cancel, and the script checks every balance.

Call	Transaction	Block	Status
IntentLog.commit	`0xba66470cb8f03e9a84a6d28edda849c9355c44ae9748c06084e1552057268892`	76	success

3. A real run on FISCO: the fleet scenario (the five moments) and the neighbour scenario

FISCO is the only chain in this run. IntentLog used: `0xF86cED0C9738894079cA4FE9b48339b589d91990` (an earlier deployment on the same chain, before `fisco.sh` last redeployed; it is still live and was read back now).

78 transactions, 78 with a successful receipt in the recorded block, 30 IntentLog commits, 30 of them read back from the FISCO IntentLog with the engine's hash. 15 of these hashes also appear in the captured Base Sepolia run, 15 confirmed in the Base IntentLog by a read call: both ledgers hold the same EIP-712 intent hash under the same `commit(bytes32 jobId, bytes32 intentHash)` format.

#	Scenario	Event	Kind	Transaction	Block	Gas	Status	IntentLog check
1	fleet	anchor: vendor bond of 5000 yuan posted	vendor_bond	`0x0fddbcee…3a4e`	20	38,104	success

4. FATE model provenance

The credit model trained with WeBank's FATE federated learning framework is pinned on the same consortium ledger: its sha256 (from `fate/model.json`) was committed to the FISCO IntentLog under the job id keccak256("fate-model"). Anyone holding the model file can recompute its canonical hash (every field except sha256 and sha256_of, sorted keys, no spaces; `pnpm test` does this) and check the ledger before trusting a credit score.

Field	Value
Model sha256	0x3f321ae68cdfed7e1eb4d01fc6b41b30dc2851d20e51d80df75c8a5343de314f
Job id	0xe83832c97db5735e2627f5e1f29531b7d08a724c2f00f81cad56609ab2dd6b6a (keccak256 of "fate-model")
Transaction	0x6a6be28d9178e3ab3403acb4e54e341cfb8119cc4e4c30aff1c0ba32d01da2e6
Block	82
Status	success
Read back now	committedAt 1792497335845, jobOf matches: yes, equals `web/src/engine/credit/fate-model.json`: yes

5. One real run on both ledgers

`web/evidence/run-2026-10-20T11-58-26-050Z.json`: the fleet scenario in real mode with the funded Base Sepolia key and the FISCO target both set. Each intent was sent to both chains in the same step. Its hash was already in the Base IntentLog from the earlier Base run (docs/EXECUTION_EVIDENCE.md), so on Base the step anchored it as calldata, as the engine does on any repeat, while on FISCO the same hash was committed to the IntentLog. 15 of 15 pairs have a successful receipt on both chains and the same intent hash on FISCO.

6. One full job against the deployed contracts

Run by `contracts/script/fulljob.sh fisco`: fresh keys for six roles, every step a call to the deployed Bond, Lease, JobBoard or IntentLog with native value moving: vendor bond posted, fee locked, confirmed and split (instalment to the lender through Lease), a rogue intent committed and slashed by proof from the vendor bond, the last payment moving the title to the pilot, the hold released. 10 of 10 receipts fetched again now with status success.

#	Call	From	Value	Transaction	Block	Status
1	Bond.postVendorBond	vendor	200000000000 wei	0x9387f7e88f57d80543b055506cf0ca2cd3cea937b1907fe746240a0ca8cdb1e4	104	success

7. V2: the front running fix

See `contracts/deployments/fisco-v2.json`: IntentLogV2 accepts a commit only from the job's agent; a stranger's commit reverted, the agent's commit and the slash succeeded, and a never committed intent on a running job was still slashed.

8. The engine settles on the contracts

`pnpm settle` runs the fleet scenario on FISCO with each job's money settled by the deployed contracts in the same loop (funding transfers to fresh role wallets included in the table; charging payments and intent commits go as before): fresh role keys per run, each job's fee locked in JobBoard, confirmed and split by the contract, instalments through Lease.pay, the rogue intent slashed by proof from the vendor bond, the title moved to the pilot. A free model (minimax/minimax-m3.1-flash:free, poolside/laguna-s-2.1:free) read the job offers: 5 of 5 offers read by the model, 5 readings accepted by code against the signed listing. 26 of 26 transactions fetched again now with status success.

Checks:

- lender received from the run (wei): 650000000000 (ok)
- vendor bond decreased by the penalty (wei): 200000000000 (ok)
- lease balance at the end (wei): 0 (ok)
- title owner is the pilot: 0x6D85368D62c68f87C7C73086c054751632f64db7 (ok)
- every contract call succeeded: 26 of 26 (ok)

9. Reproduce

```
bash contracts/script/fisco.sh     # node in Docker, deploy, smoke, FATE model hash, contracts/deployments/fisco-bcos.json
cd web
export FISCO_RPC_URL=http://127.0.0.1:8545 FISCO_PRIVATE_KEY=$(cat ../contracts/.fisco/deployer.key)
export FISCO_INTENT_LOG=$(node -p "require('../contracts/deployments/fisco-bcos.json').contracts.IntentLog.address")
SURETY_PRIVATE_KEY= JIXIN_REAL=1 pnpm evidence   # FISCO only, lands in evidence/fisco/
pnpm fisco                         # receipts, IntentLog read back, this file
```
