Demo video script, about 2 minutes of speech

About 290 spoken words: a story with the technical parts named. Scene by scene. 16:9, 1080p, English subtitles. File name `International-Zishi-DemoVideo.mp4`.

Before you record: laptop awake with Docker running; clean browser window at 100 percent zoom; public link, no demo token; one practice run; tabs ready for GitHub `docs/FISCO_EVIDENCE.md` section 8, `docs/EXECUTION_EVIDENCE.md` section 3, and a terminal in `web/`.

#	Open or click	Say
1	Home page, scroll	"Meet a drone pilot. His spraying drone costs 55,000 yuan, and with nothing to pledge, no bank will lend to him. Zishi makes the drone the borrower: an AI wallet that earns per mu sprayed, repays the lender from every job, and owns itself at zero. We are team Zishi, Topic F."
2	"Watch the demo", then Start; point at a FISCO "Contract:" card	"Every card is a real transaction on FISCO BCOS, WeBank's consortium blockchain, settled through our smart contracts. A free AI model reads each job offer, and code checks every number."
3	First job shows declined	"The first job pays too little after the loan instalment, so the policy engine, 21 written rules, declines it."
4	Ask the agent: "Why was this job declined?"; type 3.5, "Check rate"; "Accept at 3.7"; "Lower the reserve"; toggle 中文	"The pilot asks why. The agent shows the numbers and asks back: accept at 3.7 yuan per mu? At 3.5 it still says no, at 3.7 yes, and asked to bend a rule, it refuses and names who could change it. In Chinese too."
5	Click "Contract: JobBoard.confirm"	"The next job pays. The fee was locked in the JobBoard contract; when the farmer confirms, the contract splits it: the instalment to the lender through the Lease contract, the bond, the pilot."
6	Held flight log card	"Then a faked flight log. A Kalman filter smooths the GPS track, the score fails, and the money stays locked."
7	"Contract: BondV2.slashByProof" card	"Then the AI is tricked into paying a stranger. Its signed intent was logged on chain first, so a party submits the proof and the AI vendor's bond pays, not the pilot."
8	Title card	"The loan hits zero, and the title moves to the pilot."
9	A "Recovery:" line, then FISCO_EVIDENCE section 8	"If a call fails, the wallet retries, or the contract refunds the farmer. 24 of 24 transactions succeeded."
10	EXECUTION_EVIDENCE section 3, click a hash to Basescan; then terminal `pnpm verify:all`	"The same job ran on Base Sepolia, a public chain, and one command re-checks every claim: 353 of 353 receipts."
11	/app/evidence: "Owner impersonation", "Send it to the agent"	"52 attacks are blocked. The AI never holds a key and never chooses who gets paid."
12	FISCO_EVIDENCE "FATE model provenance"	"And with WeBank's FATE, lenders train one credit model without sharing data, its fingerprint on chain."
13	Home page, toggle 中文	"Zishi. Software that lets machines pay for themselves."
