Execution evidence

Generated by `pnpm report` (`web/scripts/report.ts`) at 2026-10-20T12:42:54.548Z from commit `951f024678e6388470d56bd2a1c5a8984f40ace4`. Do not edit by hand.

Every row below is a real transaction on Base Sepolia (chain id 84532), fetched again from the chain while this file was written: status, block, gas and the receiving address come from the receipt, not from the engine. Amounts are demo units with no monetary value.

1. Contracts

Deployed from `0x1b9D0C2A0023d21cB9Cf9e20F7bD5d7DFb452d59` in block 48,335,911, source verified on Sourcify with an exact match.

Contract	Address	Deploy transaction	Gas
IntentLog	0x093eD0DD8E4bE4b0205a6e39d0c5988f5Cd8ad51	0xb43b1cfa…67e9	197,751
Bond	0x6161f6e08c8695849e7A8aF74c39a5A1056d5435	0x68f7117a…c578	1,949,523
Lease	0x0D21c8f6C1e6e6EA2ae5fF073F51fC4d57AC5ed2	0xeaa13a76…5fdb	800,050
JobBoard	0xAbE83C0dD54EAd67DB63C8f9e854f00756f29952	0x97227e36…6c1e	1,517,852

2. A real run of the fleet scenario

Captured from the public app in real mode (`real-run-2026-10-20.sse`): 339 events, 15 signed intents, 15 policy decisions (2 denied), 7 inbound messages through the gate (0 refused or held), 1 flight log held by the oracle, 1 proof submitted, 40 transactions. Every intent hash was committed to the deployed IntentLog by a contract call before the policy engine decided; every money event was anchored on the same chain with the event as calldata.

#	Seconds	Event	Kind	Sent to	Status	Block	Gas	Events	Transaction

Checked 40 hashes against the chain: 40 succeeded, 0 not found, 15 were `IntentLog.commit` calls with a `Committed` event each, 1,768,708 gas in total (0.0000106 ETH at 0.006 gwei).

3. One full job against the deployed contracts

Run by `contracts/script/fulljob.sh base`: fresh keys for six roles, every step a call to the deployed Bond, Lease, JobBoard or IntentLog, value moving where the contract moves it. These are contract calls, not calldata anchors. 9 of 9 receipts fetched again now with status success. Amounts are a few gwei, enough to prove the flow at almost no cost.

#	Call	From	Value	Status	Block	Gas	Transaction
1	Bond.postVendorBond	vendor	20000000000 wei	success	48,365,739	90,669	0xf080cce8…d8f6
2	Bond.register	agent	0	success	48,365,741	162,649	0x5218a105…c53d
3	Lease.open	lender	0	success	48,365,744	192,409	0x8a000651…f04d
4	JobBoard.post	farmer	100000000000 wei	success	48,365,747	187,428	0xc1d373ee…d899
5	JobBoard.start	agent	0	success	48,365,749	46,171	0x3f708c8b…954f
6	JobBoard.confirm	verifier	0	success	48,365,753	176,680	0x1b3f71b8…7db6
7	IntentLog.commit	agent	0	success	48,365,760	68,916	0x05af20e0…c73c
8	Bond.slashByProof	lender	0	success	48,365,763	187,021	0x68606a4c…d748
9	Lease.pay	pilot	60000000000 wei	success	48,365,767	66,955	0x5440d994…3bd3

What moved, read from balances at each transaction's block:

- vendor bond after post (wei): 20000000000 (before 0)
- operatorOf(agent) is pilot: 0x617cB14a84A40021E26A907b9edF9e9791d2060d
- lease id: 1
- title owner after open (lender): 0x55AFCCF107e322e0A040Ead76b475b7788D4C4Ab
- job id: 1
- JobBoard balance delta after post (fee locked): 100000000000
- lender received instalment via Lease.pay (wei): 40000000000 (balance at the tx block minus the block before; the first read through the public RPC was stale and showed 0)
- agent received rest (wei): 34670000000
- pilot bond filled (wei): 10000000000
- hold kept in JobBoard (wei): 13330000000
- lease balance after confirm (wei): 60000000000

- rogue intent hash: 0x45229be9c73782e18be195bc2cbea7557063093d338b40dc80ba47b5c45d4017
- rogue intent signer recovered off chain: agent
- vendor bond decreased by (wei): 10000000000
- treasury (deployer) received penalty (wei): 10000000000
- lender received remaining lease (wei): 60000000000 (balance at the tx block minus the block before; the first read through the public RPC was stale and showed 0)
- lease balance after final payment (wei): 0
- title owner after zero balance: 0x617cB14a84A40021E26A907b9edF9e9791d2060d
- hold: releaseHold callable after holdUntil=1792586194 (one day after confirm), not called in this run
- rail (deployer) received rail fee (wei): 2000000000 (balance at the confirm block minus the block before)

The same job ran on FISCO BCOS, see `contracts/deployments/fisco-bcos.json` and `docs/FISCO_EVIDENCE.md`. The funding and sweep transfers for the role wallets are listed in `contracts/deployments/base-sepolia-fulljob.json`.

4. Reproduce

```
cd web && pnpm install
pnpm test                       # 52 attacks blocked, 7 benign pass, every learned metric at or abov
e its floor
pnpm evidence && pnpm verify    # a simulated run and its balance sheet, every hash checked
# real chain: a funded Base Sepolia key and the demo token in the environment, then
JIXIN_REAL=1 pnpm evidence      # anchors on Base Sepolia
pnpm report                     # rewrites this file from the latest capture and the chain
```

Any hash above can be checked on Basescan or with one RPC call:

```
curl -s https://sepolia.base.org -H 'content-type: application/json' -d '{"jsonrpc":"2.0","id":1,"me
thod":"eth_getTransactionReceipt","params":["<hash>"]}'
```

5. What is simulated

In the live engine the farmer, the pilot, the lender and the vendor are scripted actors with demo keys derived from public strings (demo only, anyone can derive them). Flight telemetry is synthetic. Inside the engine the Bond, JobBoard and Lease rules run in TypeScript mirrors of the deployed contracts and only IntentLog is called on chain; section 3 is the same flow run against the deployed contracts themselves. The public app runs in simulated mode and labels every hash; real mode needs the demo token. The captured run had no model key set, so every explanation in it is the labelled template text (source template); decisions never depend on the model. With a key the model rewords explanations and the ask the agent replies, checked against the facts.
